📅 WEEK 1 DAY 1 | MONDAY, SEPTEMBER 14, 2026 | ⚛ CKAD TRACK | APPLICATION MASTERY

CKAD Master Daily Study Guide

Week 1 Day 1 CKAD

Target: VirtualBox Kubernetes Cluster (`controlplane`, `node01`, `node02`)
Orchestrator: `./lab start w1d1-ckad` • `./lab check w1d1-ckad` • `./lab solve w1d1-ckad`

📅 Scheduled Study Block (from study_schedule.ics)

Focused hands-on application developer study block. Build speed and muscle memory on imperative commands, manifests, and cluster troubleshooting.

CKAD APPLICATION DEEP DIVE — 🕒 08:00 AM - 12:00 PM

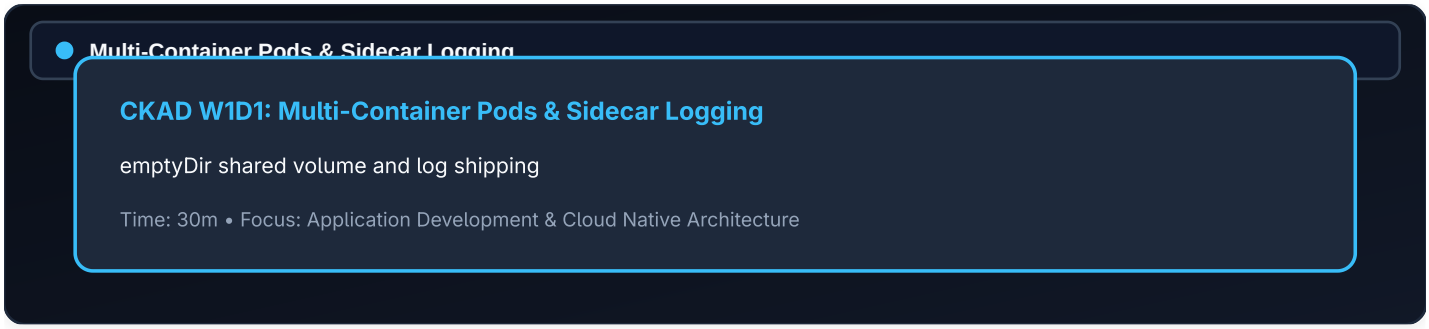

COGNITIVE RECOVERY & INTEGRATION — 🕒 12:00 PM - 03:00 PM

☸ CKAD Application Architecture Deep Dive: Week 1 Day 1 CKAD

CKAD Week 1 Day 1: Multi-Container Pods & Sidecar Logging

Overview: emptyDir shared volume and log shipping. In the Certified Kubernetes Application Developer (CKAD) exam, speed and precision are paramount. Candidates must understand containerized runtime concepts, declarative YAML specifications, and imperative kubectl CLI shortcuts.

- **Core Competency:** Multi-Container Pods & Sidecar Logging
- **Target Image / Workload:** `busybox:1.36`
- **Target Time Limit:** 30m

🛠️ Hands-on Lab Walkthrough: w1d1-ckad

🎯 Lab Scenario Objectives & Tasks

📋 Scenario Overview

Practice scenario aligned with your official certification preparation schedule. Complete all tasks under exam conditions.

🎯 Candidate Tasks

📌 Task 1: Multi-Container Pods & Sidecar Logging

1. Work in namespace `ckad-w1d1` on the cluster.
2. Objective: emptyDir shared volume and log shipping.
3. Deploy or configure workload named `ckad-app` using image `busybox:1.36`.
4. Ensure all pods are in `Running` state (Ready) and meet specifications.

🔍 Validation

Run the automated grader:

```
./lab check w1d1-ckad
```

✅ Step-by-Step Grader Solution Walkthrough

📌 Tasks & Official Solution

📌 Official Solution: Multi-Container Pods & Sidecar Logging

```
# 1. Create or verify namespace:
kubectl create namespace ckad-w1d1 --dry-run=client -o yaml | kubectl apply -f -

# 2. Run workload:
kubectl run ckad-app --image=busybox:1.36 -n ckad-w1d1

# 3. Check status:
kubectl get pods -n ckad-w1d1
```

⚡ CKAD Speed Drills & Daily Readiness Matrix

☸ Essential Kubectl Shortcuts & Terminal Aliases (.bashrc)

```
alias k='kubectl'\nalias kdry='kubectl --dry-run=client -o yaml'
```

Daily Self-Assessment Checklist

TRACK	CORE COMPETENCY / QUESTION	VERIFICATION COMMAND	MASTERY
CKAD	Can you solve Multi-Container Pods & Sidecar Logging in under 30m?	`Review scenario and solution guide`	[ ] Ready
CKAD	Can you verify requirements using kubectl jsonpath/custom-columns?	`Use -o jsonpath or -o custom-columns`	[ ] Ready
