Question #1 (Topic: Single Topic)

SIMULATION

Set configuration context:

```
[student@node-1] $ | kubectl config  
use-context k8s
```

Context

You have been asked to create a new ClusterRole for a deployment pipeline and bind it to a specific ServiceAccount scoped to a specific namespace.

Task

Create a new ClusterRole named deployment-clusterrole, which only allows to create the following resource types:

- Deployment
- Stateful Set
- DaemonSet

Create a new ServiceAccount named cicd-token in the existing namespace app-team1.

Bind the new ClusterRole deployment-clusterrole to the new ServiceAccount cicd-token, limited to the namespace app-team1.

Question #2 (Topic: Single Topic)

SIMULATION

Set configuration context:

```
[student@node-1] $ | kubectl config u  
se-context ek8s
```

Task

Set the node named ek8s-node-0 as unavailable and reschedule all the pods running on it.

Reveal Solution

Next Question

Question #3 (Topic: Single Topic)

SIMULATION

Set configuration context:

```
[student@node-1] $ | kubectl config  
use-context mk8s
```

Task

Given an existing Kubernetes cluster running version 1.22.1, upgrade all of the Kubernetes control plane and node components on the master node only to version 1.22.2.

Be sure to drain the master node before upgrading it and uncordon it after the upgrade.

You can ssh to the master node using:

```
[student@node-1] $ | ssh mk8s-master-0
```

You can assume elevated privileges on the master node with the following command:

```
[student@mk8s-master-0] $ | sudo -i
```

You are also expected to upgrade kubelet and kubectl on the master node.

Do not upgrade the worker nodes, etcd, the container manager, the CNI plugin, the DNS service or any other addons.

Question #4 (Topic: Single Topic)

SIMULATION

No configuration context change required for this task.
Ensure, however, that you have returned to the base node before starting to work on this task:

```
[student@mk8s-master-0] $ | exit
```

Task

First, create a snapshot of the existing etcd instance running at <https://127.0.0.1:2379>, saving the snapshot to `/var/lib/backup/etcd-snapshot.db`.

The following TLS certificates/key are supplied for connecting to the server with `etcdctl`:

- CA certificate: `/opt/KUIN00601/ca.crt`
- Client certificate:
`/opt/KUIN00601/etcd-client.crt`
- Client key:
`/opt/KUIN00601/etcd-client.key`

Creating a snapshot of the given instance is expected to complete in seconds.

If the operation seems to hang, something's likely wrong with your command. Use `CTRL + C` to cancel the operation and try again.

Next, restore an existing, previous snapshot located at `/var/lib/backup/etcd-snapshot-previous.db`.

Next Question

Question #5 (Topic: Single Topic)

SIMULATION

Set configuration context:

```
[student@node-1] $ | kubectl config use-context hk8s
```

Task

Create a new NetworkPolicy named `allow-port-from-namespace` in the existing namespace `fuhar`.

namespace fubar.

Ensure that the new NetworkPolicy allows Pods in namespace internal to connect to port 9000 of Pods in namespace fubar.

Further ensure that the new NetworkPolicy:

- ☞ does not allow access to Pods, which don't listen on port 9000
- ☞ does not allow access from Pods, which are not in namespace internal
